VALIDATION REPORT · TEXT GENERATION

DeepSeek V4 Pro

on M5 Ultra 512 GB · 1.6-bit (IQ1_S) · Ollama / LM Studio · Chat

STATUS · OCT 22, 2026

Not validated

4 of 5 checks pass

DeepSeek V4 Pro at 1.6-bit runs on the M5 Ultra 512 GB with 1M of context at about 47 tokens a second.

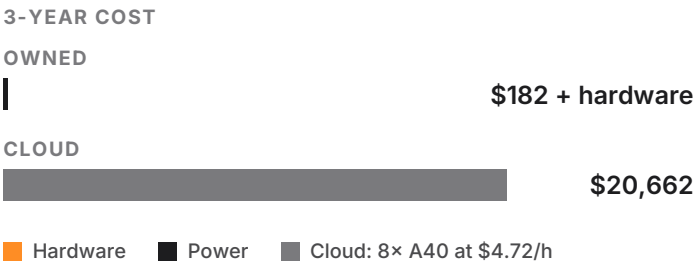
VALIDATION

CHECK	TARGET	RESULT	STATUS
Fits in GPU memory	384 GB usable	317 GB needed	PASS
Headroom	5% free	67.3 GB free (18%)	PASS
Context for chat	16K or more	1M	PASS
Writing speed	15 tok/s or more	47 tok/s	PASS
First reply	under 3 s, 2K prompt	9.5 s	FAIL

Targets: a reply you can read along with, a first reply the use case tolerates, and 5% of memory left free. Calculated from published specs, not benchmarked.

BUDGET

HARDWARE, ONE-TIME	MSRP not entered
POWER, PER YEAR	$61 · 231 W at the wall
CLOUD INSTEAD, PER YEAR	$6,887
3-YEAR TOTAL, OWNED	Hardware + $182 power
3-YEAR TOTAL, CLOUD	$20,662
BREAK-EVEN	Needs the hardware MSRP



Budget basis: 4 h a day, power at $0.18 per kWh, cloud at RunPod on-demand prices as of Oct 22, 2026. Hardware at the MSRP entered in the calculator, not a GPU Partner quote. A 3-year view; resale value, staff time and taxes aren't counted.

RYZEN AI MAX+ 395 128 GB	Too big

MEMORY

WEIGHTS	307 GB
CONTEXT	8.7 GB
RUNTIME	733 MB
SYSTEM	128 GB
FREE	67.3 GB

HOW TO RUN IT

LLAMA.CPP	`llama-server -hf unsloth/DeepSeek-V4-Pro-0813-GGUF`
VLLM	`vllm serve deepseek-ai/DeepSeek-V4-Pro`
MLX (MAC)	`mlx_lm.chat --model mlx-community/DeepSeek-V4-Pro-4bit`
MODEL CARD	huggingface.co/deepseek-ai/DeepSeek-V4-Pro

METHOD AND ASSUMPTIONS

Memory is the weights (parameters times bits per weight, read from each model's config.json), the context cache for every chat, and the runtime, against the memory this GPU can use after the OS and display take theirs. Writing speed is memory bandwidth over the bytes read per token, plus a per-layer latency, calibrated against llama.cpp benchmarks. First reply is the prompt's FLOPs over the chip's dense 16-bit TFLOPS at the runtime's measured efficiency. Running cost is power at the wall at your rate and hours; the cloud figure is the cheapest RunPod on-demand GPU that runs the same job. Accuracy: memory lands within about a gigabyte; speeds and times are rough, about ±25%. Model data and hardware specs checked Oct 2026; cloud prices are RunPod's on-demand list as of Oct 22, 2026. Report VR-0SA26JR, generated October 22, 2026.
